As a recent computer science graduate, my passion for technology and my ability to find creative solutions drives me to look for opportunities where I can develop applications from scratch. I am passionate about improving existing processes and bringing innovation through the implementation of technology solutions. I am determined to continually learn and grow in my field, keeping abreast of the latest development tools and techniques in order to create impactful and quality applications.

Experience

Flextronics: Software Developer Intern

November 2022 - Current, Guadalajara, Jalisco (remote)

- FlexLink® application support.

As an intern in the FlexLink team, I specialized in updating application functionalities using Angular and .Net technologies. My role involved leveraging these tools to enhance key features within the application. Furthermore, I deepened my proficiency in SQL database management, significantly contributing to my overall skill set.

Daikin Applied Americas: Application Engineering Intern

January 2022 - November 2022, San Luis Potosí, México

- Remote diagnose and repair of units based in Linux.

As an intern in the Application Engineering team, I acquired valuable insights into Linux systems. My role primarily involved honing analytical skills through the examination of units to identify and address issues causing failures. This included both fixing the problems directly and effectively communicating findings to the development team for resolution."

Education

Universidad Autónoma De San Luis Potosí

Computer Science
